PROPHILE

Self-taught frontend developer expert in ReactJS, HTML, SASS and ViteJS. I have created dynamic and responsive websites and web applications consuming APIs. I love web development and learning new technologies. I aspire to work as a frontend developer in a company that offers me challenges and learning opportunities.

SKILLS

- HTML
- CSS
- Javascript
- ReactJs
- Git and Github
- Tailwind CSS
- Sass
- ViteJs

PROJECTS

CRYPTO VIEW

I created a website with React that displays cryptocurrency prices using CoinGecko and Firebase. The website has a login system and a responsive design with Tailwind CSS. The project was a tool to visualize cryptocurrency market data.

REACT MOVIE APP

My website showcases my work with React and other technologies. React helps me create interfaces with JSX, which mixes HTML and JavaScript. I use Axios to get movie data from an API and display it with React components. For styling, I use Sass, a CSS preprocessor.

SHORTLY

This project consists of a website that uses shrtcode to shorten URLs. With ReactJS, Axios and Sass, I created an interface that adapts to different screens and has an attractive design. I learned how to use an external API, manage component state and validate inputs. I followed Frontend Mentor's design and coding standards. I liked the result and the learning.
